

INFORMATION SECURITY POLICY

We at MAPA make great efforts to be a leading and exemplary organization in our industry in the field of information security.

Accordingly;

In order to attain our MAPA Strategic Goals as set and declared, our MAPA Information Security Policy is of great importance and our Information Security Policy is intended to protect our network and infrastructure systems, technology services and all the business processes in general as well as information assets considering the principles of confidentiality, integrity and accessibility.

We have established an integrated management policy that covers the aspects of Quality, Environment and OHS. Our management is aware of the importance of the continuous improvement of the efficiency of the management systems and the allocation of the required sources in order to improve the performance of quality, environment, occupational health and safety.

Our goals are to:

- Establish the best level of security and prevent or minimize any practices that may pose a risk in respect of information security by means of applying the information security standards to all the sources in an efficient manner;
- Ensure the continuity of the business processes and use the information technologies in order to attain the business goals in an efficient manner;
- Carry out risk management procedures in accordance with the respective standards; ensure that the conformity, adequacy and efficiency of the information security system are independently reviewed and provide fast and efficient solutions for such risks and vulnerabilities identified;
- Provide an efficient data classification, protect the critical information at the best level, establish a system of access authorization according to the respective requirements and apply safe and secure technologies and techniques;
- Comply with legislations and agreements with third parties (business partners, customers, suppliers) and ensure that protective measures are taken in respect of confidentiality and information security in these agreements;
- Continuously improve the level of awareness and culture of information security and safeguard the reliability and image of the company.
